

Foundations of Building and Construction Technology

Do you enjoy team-driven building activities that involve strategy, applied math and science, and the outdoors? A career in construction might be the right fit for you!

This is just the beginning of a lifetime of exciting opportunities that a construction career can bring you. As your knowledge and experience grow, there will be many career choices available to you... craft professional, foreman, project manager, company owner, just to name a few.

All students will work towards completion of The National Center for Construction Education and Research Module Certifications, as well as The Occupational Safety and Health Administration Construction Safety Certification.

All students develop the “soft skills” that make them employable, including resume development, job-interview preparation, communication, teamwork, and public speaking.

All students will participate in various hands-on activities of the Young American student built house project. Yes, this is a student built home!
